## CENSUS OF INDIA 1971

### A—CENTRAL GOVERNMENT PUBLICATIONS

The publications relating to Haryana bear Series No. 6, and are bound separately as follows :—

Part I-A	..	General Report	Part III-B	..	Establishment Tables
Part I-B	..	General Report	Part IV	..	Housing Report and Tables
Part I-C	..	Subsidiary Tables			
Part II-A	..	General Population Tables	Part VI-A	..	Town Directory
Part II-A Supplement	..	General Population Tables (Standard Urban Areas)	Part VI-B	..	Special Survey Reports on selected towns
Part II-B	..	Economic Tables	Part VI-C	..	Survey Reports on selected villages
Part II-C(i)	..	Mother Tongue, Religion and Scheduled Castes and Scheduled Tribes Tables	Part VIII-A	..	Administration Report: Enumeration (for official use only)
Part II-C(ii)	..	Social and Cultural Tables and Fertility Tables	Part VIII-B	..	Administration Report : Tabulation (for official use only)
Part II-D	..	Migration Tables			
Part III-A	..	Establishment Report	Part IX-B	..	Census Atlas

### B—HARYANA GOVERNMENT PUBLICATIONS

Part IX-A	..	Administrative Atlas (The present volume)
Part X	..	District Census Handbook for each district in three Parts :—
		Part A—Village and Town Directory
		Part B—Village and Townwise Primary Census Abstracts
		Part C—Analytical Report, Administrative Statistics and District Census Tables

(Parts A and B of the District Census Handbook for each District of Haryana State have been printed in one volume)

## FOREWORD

In order to ensure complete coverage at a population count, the Census Organization obtains or prepares upto date detailed maps of all administrative units in the country on the eve of a Census. Though in several parts of the country maps of the Districts, Tahsils, Police Stations, etc., are available with the State Revenue or Survey authorities, often times, they required to be brought upto date and they also varied greatly in scale. One also found it difficult to secure a complete or compact set of all these maps from State authorities. The Census Organization took upon itself the task of updating of the administrative maps and the standardization of scales essentially to meet its own requirements of coverage at the census and analysis of data. Standardization of symbols was also attempted to depict certain features such as the State/district/tahsil boundaries, administrative headquarters, national and state highways and other roads, markets and *mandis*, post and telegraph offices, travellers' bungalows, hospitals, etc. All urban centres and larger villages were depicted by names in the district maps, and in the tahsil maps the location of every village by dots proportionate to the population size and the distinctive location code number of each village marked. In each of the District Census Handbooks (there are 356 districts in the country) the district map as well as the tahsil maps will be printed.

While these administrative maps, prepared with great amount of care and effort, served the purposes of the Census extremely well, the 1971 Census Organization felt that these would be invaluable for many an administrative purpose and for planning and also to the scholars who might like to utilize these maps for various studies. Therefore, it was decided, after full consideration at the all-India Census Conference of Courtallam (1970) and Pahalgam (1971) to publish all the district and tahsil maps of each State together in a compact and handy volume entitled "Administrative Atlas". Though this Atlas is basically a compilation of administrative maps giving the set up as on the census date, i.e., 1st April, 1971, it has been enriched by adding inset maps, wherever necessary, showing the changes in the boundaries during the decade 1961-71. Besides, the Atlas also contains a few introductory State maps showing certain basic characteristics as the physiography, density of population, distribution of towns and the distribution of rural population. A few schematic urban maps are also added to give the land-use patterns in the typical urban areas of the State. In order to make the Atlas somewhat self-contained statistical statements are also added giving data on the area, population size, growth rate, sex and age structure, literacy, Scheduled Caste and Scheduled Tribe population and religion.

The Census Organization, as is well-known, is one of the largest producers of maps in the country. Apart from the Administrative Atlas, the 1971 Census publication programme envisages the production of separate Census Atlases which will depict the physiographic, demographic, economic, social and cultural characteristics of each State as derived from the census as well as other sources of data.

I wish to place on record my appreciation of the dedicated services of Dr. B.K. Roy, the Map Officer of the Registrar General's Office and all his colleagues in the Map Unit and also of all the State Directors of Census Operations and the staff of their Map Units who have all worked together as a team and have succeeded in the production of this Administrative Atlas which I hope will serve the needs of the administrator, the planner and the scholar alike.

New Delhi,  
September 26, 1972.

A. CHANDRA SEKHAR  
Registrar General & Census Commissioner,  
INDIA.

## PREFACE

The proposal for bringing out an Administrative Atlas was mooted by the Director of Census Operations, Uttar Pradesh, who observed that the utility of district and tahsil maps could be greatly enhanced if these were compiled and brought out in a single volume. It was a striking idea and was readily accepted keeping in view the utility of such a publication to the various heads of Government Departments, research scholars and the public in general. Since most of the maps prepared for inclusion in the District Census Handbooks were to be included in the Administrative Atlas, there was no difficulty in preparing such an Atlas without much additional cost. Accordingly, the State Government was approached and apprised of its importance and its special significance for the Haryana State. Considering its utility the Government of Haryana agreed to bear the cost of this Publication.

This Atlas is a storehouse of information in so far as it gives the location of villages, tahsils and districts of Haryana as they existed at the time of 1971 Census. In addition the distribution pattern of population and amenities available down to the lowest unit with minute details have been depicted in the tahsil maps. Apart from the detailed district and tahsil jurisdictional maps, a number of other maps have been included documenting physiography, distribution of rural population, density, distribution of towns, administrative divisions of the State and also land use pattern as existing in the eleven typical urban centres of the State. Alongside all the relevant information has been furnished to assist the reader to a better understanding of the maps. An introductory note on land, people and economy given in the beginning of this publication will make the reader familiar with the Haryana State. This is probably the first time that such a carto-demographic study of such accuracy and detail has been ever attempted. All the administrators, specially those connected with the land revenue, formulation of various schemes and plans on regional basis, people in the public life of the State and scholars conducting applied research in the various branches of humanities will find this publication to be of great assistance in their work. This Atlas will also help in coaching our readers for an all out appraisal of the contents of the second part of the Census Atlas, being published separately which will depict the physiographic, demographic, economic, social and cultural characteristics of the State based on the information released by the Census 1971 as well as other sources of data.

In finalising this publication we had to take help from various departments such as the Director, Land Records, Haryana, Municipal Committees/Notified Area Committees and the Survey of India. I am thankful to them for extending their cooperation in bringing out this volume. In my Directorate the maps were prepared under the able guidance of Shri Shiv Rai Puri, Cartographer. He was assisted in this task by Sarvshri Amarjit Singh, Economic Investigator, N.P. Gupta, Artist and Gobind Singh, Hand Press Machine Operator. The collection and compilation of data for the maps was done by Sarvshri Ramesh Kumar Madan and Karam Singh, Assistant Compilers. The proof reading work was attended to by Shri J.N. Suri, Tabulation Officer with the assistance of Sarvshri Daulat Ram, Statistical Assistant and R.D. Verma, Proof Reader. I am thankful to all these officials for their dedicated work in bringing out this publication.

My thanks are also due to Shri Tara Chand, Controller and Shri K.S. Mathur, Assistant Controller of Printing & Stationery, Haryana, for extending their cooperation in the printing of this publication.

Before I conclude I must express my gratitude to Shri A. Chandra Sekhar, Ex-Registrar General, India, and his worthy successor Shri R.B. Chari for providing inspiration and guidance in seeing through this project. My grateful thanks are also due to Dr. B.K. Roy, Map Officer, whose technical guidance throughout has contributed in no small measure to the production of a work of such a high order and significance.

Dated, Chandigarh :  
the 4th November, 1974.

I.E.N. CHAUHAN  
Director of Census Operations,  
Haryana.

## INTRODUCTORY NOTE

The Haryana State (Latitude 27°39' to 30°55'5"N and Longitude 74°27'8" to 77°36'5"E) comprises a part of the Indo-Gangetic plain. Haryana State came into being with effect from 1st November, 1966 on the re-organization of composite Punjab on the linguistic basis. It is one of the north-western states of India adjoining Delhi, the capital of the country. The State occupies the seventeenth position in the land area and ranks fifteenth in population size among the States of the country. Haryana is bounded by Uttar Pradesh and Delhi on the east, by Rajasthan on its south-west, Punjab, Chandigarh and Himachal Pradesh on the north-west and north. The Siwaliks are located in its north and the river Yamuna in the east. The Aravallis running south of Delhi and through Gurgaon district upto Alwar and further on the desert of Bikaner from its south-western boundary. To the west it is bounded half-way by the Ghaggar River.

According to the Surveyor General of India, the total area of the State is 44,222 square kilometres which forms 1.35 per cent of the country. Of this, 43,770.2 square kilometres or 98.98 per cent constitute rural areas while the remaining 451.8 square kilometres are covered by the urban definition. The district-wise area figures alongwith the rural and urban break up have been given in the following table :—

				(Sq. Km.)
State/District		*Total	Rural	Urban
1		2	3	4
Haryana	.. ..	44,222.0(100.0)	43,770.2(100.0)	451.8(100.0)
Ambala	.. ..	3,833.0(8.7)	3,722.0(8.5)	111.0(24.6)
Karnal	.. ..	8,068.0(18.2)	7,988.2(18.3)	79.8(17.7)
Rohtak	.. ..	6,043.0(13.7)	5,987.7(13.7)	55.3(12.2)
Gurgaon	.. ..	6,146.0(13.9)	6,068.6(13.9)	77.4(17.1)
Mahendragarh	.. ..	3,459.0(7.8)	3,436.0(7.8)	23.0(5.1)
Hisar	.. ..	13,982.0(31.6)	13,900.6(31.7)	81.4(18.0)
Jind	.. ..	2,691.0(6.1)	2,667.1(6.1)	23.9(5.3)

The analysis of the above figures reveals that Hisar with an area of 13,982 sq. km. or representing 31.6 per cent of the State area is the biggest district of the State followed by Karnal and Gurgaon and others and the smallest district with an area of 2,691 sq. km. or 6.1 per cent of the total is Jind. Regarding the urban areas, Ambala district with an area of 111 sq. km. or 24.6 per cent is the most urbanized district of the State followed by Hisar with an area 81.4 sq. km. or 18 per cent of the total.

## PHYSIOGRAPHY

Excepting some hills of the Siwalik system in the north and of the Aravalli system in the south, the Haryana State is a plain area. The plain can be sub-divided into eastern and western regions on the basis of aridity. The 50 cms. isohyet bifurcates the plain into two. The western plain which has a higher degree of aridity, mainly covers Hisar and Mahendragarh districts. The western plain has a dry climate, steppe vegetation and sand dunes of various shapes and sizes. The eastern plain extends from 50 cms. isohyet upto Yamuna River. The entire plain has a fertile, light and loamy soil.

The Siwalik tract consists of a broad table-land composed of sand, silt, clay and conglomerates. A large number of rain-fed torrents flow down the outer slopes of the Siwaliks and spread much gravel and pebbles in their beds. Of these streams, the Ghaggar and the Markanda are the important ones.

The Aravalli range is a narrow ridge stretching into Haryana for 90 kilometres in the North-east-South-west direction upto Delhi. In Haryana, the range at no place is higher than 518 metres above sea level, yet this area is generally unfavourable to man due to its rocky nature. The range contains some minerals. The slope, in general, is from south to north, in which direction the streams such as Dohan and Sahibi, bring rain waters from the Rajasthan side.

\*Total area figures for the State and the Districts represent "geographical area" figures (provisional) supplied by the Surveyor General. Figures for urban areas are those supplied by the local bodies. Area figures for rural areas are derived by subtracting the urban area from the total area of the district.

## SOILS

Most of the soils in the State are medium textured. Loamy sand is the average texture of the soils in the whole of Mahendragarh district and the Tahsils of Dabwali, Loharu, Jhajjar, Rewari, Gurgaon, and Ballabgarh of the State. Sand is the average soil texture available only in Block Khol of Tahsil Rewari.

There are two large tracts of loam, one consisting of Tahsil Gohana and parts of Tahsil Rohtak and the other including Tahsils Guhla, Kaithal, Thanesar and parts of Tahsils Karnal and Ambala. Sandy loam is the average soil texture available in the remaining parts of the State. The average soil texture viz, silty loam, clay loam or clay is also found in small patches here and there.

## SUB-SOIL WATER-TABLE

A study of the Sub-soil Water-table is marked with great variations in the different parts of the State. The Sub-soil Water-table is more than 15 metres deep and is found largely in the parts of Hisar, Mahendragarh and Gurgaon districts and in the western parts of the Jind and Rohtak districts. While along the banks of Ghaggar river the Water-table is 6 to 9 metres deep in the District Hisar and to the east of the Ghaggar river in the Ambala district, in most of the Ambala, Karnal, Rohtak and Jind districts, it ranges from 3 to 6 metres. In Hansi area the Water-table is very high resulting in water-logging conditions. Such conditions are also existing in the Bhakra Canal and the Western Yamuna Canal circles where the Water-table varies from 1.5 metres to 3 metres.

## DRAINAGE

The State is devoid of any perennial river except for the Yamuna which provides irrigation facilities. The river flows along the eastern boundary of the State. Among the west-ward flowing rivers, Ghaggar, Markanda, Saraswati and Chautang are more important. Since the Aravallis hills project from the south to the north, a number of small rainy season rivulets carry water from Rajasthan into Haryana in the south. Among them, the Sahibi, the Kansaoti (or Kasawati), the Indoris and the Landoha are worth mentioning here.

## NATURAL VEGETATION

The State is not rich in forest resources. Out of 17,849 km<sup>2</sup>. forest area of the composite Punjab, only 1,362 km<sup>2</sup>. or about 8 per cent of the total has come to the share of the Haryana State. As the areas which have the potential for the proper growth of the forests had gone to the share of Himachal Pradesh. With only 3.1 per cent of the area under forests, the Haryana is one of the least forested States of the country. Prevailing arid conditions and long human occupancy, have been responsible for its poor vegetal cover.

It may be mentioned here that the rain and the type of soil are the main determining factors of vegetation types in the plains while in the hilly areas, temperature, altitude and slope are additional influencing factors. The natural vegetation found in the south-western semi-arid and dry zones, is tropical thorn forest consisting of plants like Kikar, Jal, Jund and inferior grass. Tropical Dry Deciduous forest is available in central zones which are hot and semi-dry. Vegetation of the Sub-Tropical Broad Leafed forest type is found in the hot and sub-humid zone, adjoining the hills in the northern parts of the Ambala district. Sub-Tropical Pine forests are found in the higher parts of Siwaliks.

## MINERALS

For rapid economic advance, the importance of minerals can hardly be over-emphasized. Haryana enjoys a comfortable position in this respect in the north-western part of the country. The future development of industries connected with mines and minerals can be explored by undertaking systematic surveys and investigation about the quality and quantity of these minerals. The availability of minerals in the north and south of the State is related to its geology and structure.

Limestone bands common in the Siwaliks of Ambala district are used for the manufacture of cement at Surajpur. The Nangal Fertilizer Factory is also meeting its limestone requirements from the Morni Hills of Ambala district.

Mahendragarh though an economically and industrially backward district otherwise is placed in a good position so far the availability of iron ore, limestone, marble, dolomite, slate, quartz etc., are concerned. In addition felspar, calcite, copper, kynite, mica and pagmatite are also available in the district. Slate mines are also worked at Kund in Gurgaon district.

Iron ore deposits of District Mahendragarh occur in two belts, viz., Karota, Antri-beharipur-Dhonkhora; and Dhanota Dhanoli Mokhuta.

## CLIMATE

The climate of Haryana is semi-arid in the south-west and of the 'Gangetic' type in the rest of the State, due to its continental location on the outer margins of the Monsoon region between the Thar Desert and the Himalayas in the north-west of

the Indian sub-continent. Monsoons bring rains from July to September. From October to June, the weather remains dry except for a few showers received from western cyclones. The following table shows the districtwise rainfall in the last five years :—

District	Actual annual rainfall in centimetres				
	1967	1968	1969	1970	1971
1	2	3	4	5	6
Ambala .. ..	127.30	81.72	84.02	113.52	148.35
Karnal .. ..	74.27	70.35	42.21	56.60	69.04
Rohtak .. ..	63.98	42.36	64.01	54.32	49.54
Gurgaon .. ..	84.91	38.24	65.50	56.35	73.69
Mahendragarh .. ..	101.58	40.23	59.69	69.37	70.00
Hisar .. ..	40.01	18.93	35.85	42.07	30.77
Jind .. ..	67.25	51.12	55.79	41.55	56.74

In the winter season, the mercury sometimes touches to freezing point, with frost in the months of December and January. The summer season is characterised by hot winds (*Loo*) and occasional dust storms. The summer are scorchingly hot but the winters are fairly cool. Broadly speaking, it has a sub-tropical, semi-dry, continental, monsoonal climate.

The normal annual rainfall varies from less than 300 mm. in the south-western parts of the Hisar district to over 1,250 mm. in the hilly tract in the north-east parts of the Ambala district. The amount of rainfall increases in the State in the direction of south-west to north-east.

## POPULATION DISTRIBUTION AND HUMAN OCCUPATION

Though nature has not been benevolent in blessing the region with sufficient natural resources, yet it has gifted the land with a sturdy population. The semi-arid climate and the region's cultural history have 'forged a hardy stock that knows how to wrest a living out of nature'. The people are putting in their best to make their State prosperous. With a population of nearly ten million (1971), the State is not densely populated. The over-all density of population is only 227 per km<sup>2</sup>. (1971). Due to variations in physical and cultural environment, the population is not uniformly distributed. The following table shows the districtwise distribution of population, density, percentage of population and area :—

State/District	Population	Density	Percentage of State Population	Percentage of State Area
1	2	3	4	5
Haryana .. ..	10,036,808	227	100.00	100.00
Ambala .. ..	1,098,405	287	10.95	8.67
Karnal .. ..	1,981,303	246	19.74	18.24
Rohtak .. ..	1,785,534	295	17.79	13.66
Gurgaon .. ..	1,707,369	278	17.01	13.90
Mahendragarh .. ..	691,639	200	6.89	7.82
Hisar .. ..	2,132,948	153	21.25	31.62
Jind .. ..	639,610	238	6.37	6.09

The highest density of 295 persons per km<sup>2</sup>. is found in Rohtak district followed by Ambala, Gurgaon, Karnal, Jind, Mahendragarh and Hisar. The lowest density (153) of Hisar district is due to its unfavourable climate and soil texture. It may

be mentioned that the State being predominantly agricultural, the factors explaining the distributional pattern of population relate mostly to the productivity of soil. However, with the extension of irrigation facilities to the drought affected areas, a considerable re-distribution of population is taking place affecting thereby the degree of concentration of population in different parts of the State. From about 4.6 million in 1901, the population of Haryana rose to 10 million by 1971, giving a percentage increase of 117.1. The percentage increase in urban population is more than double that of the rural population no doubt, due to better civic amenities and larger avenues for employment available in the urban areas.

## SEX-RATIO

Although in number the two sexes are not widely divergent, their disparity is of great interest to social scientists because of the variance roles of the two sexes in economy and society.

Haryana is a region with a deficiency of females. This fact is supported by the 1971-Census results that the sex-ratio in Haryana is 867 whereas in India it is 930. Low sex-ratio at birth and a higher rate of mortality among females may explain this phenomenon.

Rural sex-ratio of Haryana is higher than that of the urban sex-ratio, but it is not as high as in other parts of India, because of the rural character of small towns and preponderance of family migrations to large towns.

It may be explained that the sex-ratio is relatively high in the southern part (except Tahsils Ballabgarh, Palwal and Nuh) of the State and goes on decreasing towards the north. The sex composition of an area is largely associated with its economy. The areas of high sex-ratio are the regions of inferior agriculture impelling out-migration while those with low sex-ratio are marked by a fair degree of industrial development attracting many workers.

## LITERACY

According to the Census definition literacy refers to a person who can read and write any one or more languages with understanding. The percentage distribution of literate persons between the rural and urban areas is similar to that of 1961 despite a big increase during the decade. The rate of literacy for the State comes to 26.89 per cent as against 29.46 per cent for the country as a whole.

Like other rural areas of the country, the literacy rate obtainable in the country side of the State is lower as compared to the position obtainable in the urban areas. In the rural areas the highest literacy rate 26.71 has been worked out for Rohtak district and the lowest 14.85 in Jind district. Regarding the urban areas the highest percentage of literate persons (56.03) have been reported from Ambala district and the minimum 42.45 per cent in Jind district. The following table depicts literacy rates obtainable in the districts of the State.

State/District	Percentage of Literate and Educated Persons					
	Rural			Urban		
	Persons	Males	Females	Persons	Males	Females
1	2	3	4	5	6	7
Haryana ..	21.72	32.57	9.24	51.00	59.12	41.48
Ambala ..	26.17	35.05	15.75	56.03	62.09	49.11
Karnal ..	19.19	27.89	8.99	52.26	59.48	43.85
Rohtak ..	26.71	39.52	12.23	52.48	61.04	42.59
Gurgaon ..	22.70	35.00	8.54	51.95	61.07	40.89
Mahendragarh ..	24.12	39.36	7.26	42.76	55.16	28.53
Hisar ..	18.52	28.43	7.14	46.41	55.15	35.96
Jind ..	14.85	24.30	3.88	42.45	51.46	31.79

## SCHEDULED CASTES/SCHEDULED TRIBES

"Scheduled Castes" means such castes, races or tribes or parts of or groups within such castes, races or tribes as are deemed under Article 341 to be scheduled castes for the purposes of this Constitution.

“Scheduled Tribes” means such tribes or tribal communities or parts of or groups within such tribes or tribal communities as are deemed under Article 342 to be scheduled tribes for the purposes of this Constitution.

Under Articles 341 and 342 of the Constitution, the President of India is empowered to specify the list of scheduled castes and scheduled tribes for each State and Union Territory. According to the latest instructions on the subject, as many as 37 castes are listed as scheduled castes in the State of Haryana. Of these, 33 scheduled castes are listed for the whole State, three for districts other than Mahendragarh and Jind and one for Mahendragarh and Jind districts only. There is, however, no scheduled tribe, listed as such, for the whole or any part of Haryana State.

The population of scheduled castes in Haryana according to 1971- Census is 1,895,933. This accounts for 18.89 per cent of the total population of the State. This percentage of scheduled caste population to total population of the State is quite higher when compared with the corresponding figure of 14.60 per cent for India as a whole. In Haryana, the percentage of scheduled castes is higher from all the States except Punjab, Himachal Pradesh, Uttar Pradesh and West Bengal. The percentage of scheduled caste population in Haryana increased from 17.97 per cent in 1961 to 18.89 per cent in 1971. But at the all India level, the percentage of scheduled caste population to total population has slightly gone down. Districtwise distribution of scheduled caste population is given below :—

State/District	Scheduled Castes			Percentage of scheduled caste population to total population 1971	Percentage growth rate of scheduled caste population during 1961-71
	Total	Rural	Urban		
1	2	3	4	5	6
<b>Haryana</b> ..	<b>1,895,933</b>	<b>1,698,626</b>	<b>197,307</b>	<b>18.89</b>	<b>+38.98</b>
Ambala ..	245,970	212,409	33,561	22.39	+32.80
Karnal ..	373,319	342,867	30,452	18.84	+40.07
Rohtak ..	311,221	279,851	31,370	17.43	+27.57
Gurgaon ..	276,162	240,752	35,410	16.17	+40.77
Mahendragarh ..	103,449	94,077	9,372	14.96	+25.86
Hisar ..	463,665	416,018	47,647	21.74	+52.13
Jind ..	122,147	112,652	9,495	19.10	+43.21

The growth rate of scheduled caste population during 1961-71 for the State as a whole comes to 38.98 as against 32.23 per cent observed in the general population. This shows that the scheduled caste population in Haryana has increased at a faster rate than the general population during the last decade. This position holds good in all the districts of the State except Mahendragarh where the growth rate of the total population is more. Ambala district has the highest percentage of scheduled caste population (22.39) followed by Hisar (21.74) and the lowest percentage has been observed in Mahendragarh district (14.96). Scheduled caste population constitutes 22.55 and 11.13 per cent of the total population in the rural and urban areas respectively. In other words, we can say that every fifth person in the rural areas and every ninth person in the urban areas of the State belongs to the scheduled castes. This concentration of scheduled castes in the rural areas have been observed in all the districts of the State.

The sex-ratio in the scheduled caste population of the State as a whole is 871 females per 1,000 males as against 867 females in the general population. The sex-ratio obtaining in the scheduled caste population is thus slightly better than that in the general population. The literacy rate among the scheduled castes in the State as a whole is 12.60 per cent. This is far too low as compared with the literacy rate in the general population of the State which is 26.89 per cent. Among the male population of scheduled castes, the literacy position is somewhat better at 20.88 per cent as against the corresponding figure of 37.29 per cent for the general population. The literacy rate among the female population of scheduled castes in the State as a whole is only 3.09 per cent as compared with the female literacy in the general population at 14.89 per cent. A very great effort needs to be made to improve the literacy rate among the scheduled castes and especially of their woman folk. The proportion of workers among the scheduled castes in the State as a whole is 27.3 per cent. As against this the proportion of workers in the general population is 26.4 per cent. They claim better proportion both in the rural and urban areas.

## RELIGION

Religion is one of the important and basic cultural characteristics of a population. Data on religion can be usefully utilized by the public and the scholars for carrying out ethnographic and socio-economic studies. In Haryana, as a whole, the Hindus are the dominant religious group accounting for 89.23 per cent of the total population. The Sikhs form the next largest group with 6.29 per cent while the percentage of Muslims is 4.04 of the total population. Thus the followers of three religions namely, Hindus, Sikhs and Muslims account for 99.56 per cent of the total population of the State. Among the other religions, the number of Jains is 31,173 but in terms of percentage to total population they constitute only 0.31 per cent. Christianity which comes next has 9,802 followers in the State *i.e.* 0.10 per cent of total population.

The majority of the Muslim population of Haryana is living in two tahsils namely, Nuh and Ferozepur Jhirka of District Gurgaon. The religious composition of the State is given below :—

Religion		Number of Persons	Percentage to total population of the State
1		2	3
<b>Total</b>	.. ..	<b>10,036,808</b>	<b>100.00</b>
Hindus	.. ..	8,956,310	89.23
Sikhs	.. ..	631,048	6.29
Muslims	.. ..	405,723	4.04
Jains	.. ..	31,173	0.31
Christians	.. ..	9,802	0.10
Buddhists	.. ..	845	0.01
All others	.. ..	1,907	0.02

## ECONOMIC ACTIVITIES

Information regarding economic activities is of great importance as it throws light on the economic health of a region. In India, 32.92 per cent of the population is enumerated as workers whereas in Haryana 26.44 per cent of its population is engaged in economic activities (1971). This low percentage of workers may on the one hand reflect the higher capacity of the working population to support larger number of dependents, on the other it may reflect the growing magnitude of unemployment.

It is surprising to note that the percentage of female workers to the female population is 2.41 in Haryana whereas in India it is 11.85 and most of the female workers in the State are engaged in agriculture. The lack of participation by women in other economic activities is attributed to certain prejudices against their joining the economic struggle. However, there are significant variations both with regard to the proportion of working population and its sex composition. The percentage of workers (Persons, Males and Females) to total population (Persons, Males and Females) has been given below :—

State/District	Total Workers			Percentage of		
	Persons	Males	Females	Workers to total population	Male workers to male population	Female workers to female population
1	2	3	4	5	6	7
<b>Haryana</b>	<b>2,653,993</b>	<b>2,541,577</b>	<b>112,416</b>	<b>26.44</b>	<b>47.27</b>	<b>2.41</b>
Ambala	300,738	292,262	8,476	27.38	49.47	1.67
Karnal	535,762	519,574	16,188	27.04	48.62	1.77
Rohtak	422,399	403,778	18,621	23.66	42.55	2.23
Gurgaon	445,948	427,211	18,737	26.12	46.55	2.37
Mahendragarh	177,110	163,459	13,651	25.61	44.93	4.17
Hisar	601,117	571,970	29,147	28.18	50.03	2.94
Jind	170,919	163,323	7,596	26.72	47.46	2.57

The proportion of workers is lowest in Rohtak district which may be partly due to the out-migration of working males and the traditional prejudice against women joining the working force. The female participation in economic activities is the highest in the Mahendragarh district and is the lowest in the Ambala district. In general, the degree of female participation is inversely correlated with diversification of economy and general economic development of an area. It will be possible to gain more insight into the matter if the distribution of workers by different categories is examined.

Haryana is one of the predominantly agricultural States of India and as many as 49.08 per cent of the workers are cultivators (Category-I) and 16.21 per cent as agricultural labourers (Category-II). High percentage (more than 55 per cent) of workers as cultivators is found in Mahendragarh, Jind and Hisar districts as these areas are still in the stage of subsistence agrarian economy and are not fully developed in the field of industries and commerce. The lowest percentage of workers as cultivators *i.e.* 33.21 per cent is found in Ambala district where agricultural economy has become more commercial and non-agricultural activities are also absorbing the working force.

Workers engaged in livestock, forestry, fishing, hunting, plantations, orchards, mining and quarrying etc. (Categories-III & IV) account for 1.55 per cent of the workers and constitute insignificant proportion of the total working force.

As many as 9.96 per cent of the working population is engaged in manufacturing, processing, servicing and repairs (category-V). The districts which are comparatively industrially developed absorb a greater proportion of workers in the tertiary sectors. Besides, 1.84 per cent of the total workers are reported engaged in the construction activities (category-VI) of the State.

The proportion of workers engaged in the commercial activities reflect the index of the development and diversification of the commercial activities of that area. Commercial activities (category-VII) provides work to 6.72 per cent of the workers. The highest percentage of workers in commercial activity is found in the Ambala district which contains a city as well as a few industrial towns, while on the other hand Mahendragarh district absorbs less workers in these activities as the agricultural activities have not been developed. The trade activities attract more workers if the economy of that area is diversified and of a commercial nature.

As means of transport and communications (category-VIII) constitute the backbone of the present day development, the workers engaged in this sector reflect the extent of development and availability of transport, storage and communication facilities in the State. According to 1971-Census data only 2.43 per cent of the total workers have been reported under this category.

Workers grouped under the category 'Other Services' (category-IX) are 12.21 per cent of the total workers in the State. It is noteworthy that females engaged in services are less in number than the males, but the percentage of females in services to total female workers is always more than the percentage of males in services to total male workers, *e.g.* in Ambala district 16.91 per cent of male workers are in service whereas 56.92 per cent female workers are earning their livelihood from services.

## URBAN SYSTEM AND URBAN LOCATIONS

It was in the 1961-Census when, for the first time, uniform and somewhat rigid tests were sought to be applied throughout the country for taking the area as urban one and at the 1971-Census, the definition adopted for an urban centre generally follows that of 1961-Census. In Haryana, however, only places with a Municipality or a Cantonment Board or a Notified Area Committee have been treated as towns to the exclusion of all other considerations.

During 1961-71, the urban population of the State increased by 35.6 per cent as against the 32.2 per cent increase in the total population. As many as 17.66 per cent of the State population live in the towns, the corresponding figure for the country is 19.91. The State is ranked ninth among the Indian States so far as urbanization is concerned.

Haryana has an urban population of 1,772,959 persons living in 65 towns. The following table shows the percentage of urban population by size class of towns in 1971-Census:—

Class (Population Size)		Number of Towns	Urban Population	Percentage of urban population in each size class of towns
1		2	3	4
I. (Pop. 100,000 & above)	.. ..	2	227,248	12.82
II. (Pop. 50,000 to 99,999)	.. ..	9	704,821	39.75
III. (Pop. 20,000 to 49,999)	.. ..	14	462,074	26.06
IV. (Pop. 10,000 to 19,999)	.. ..	15	222,344	12.54
V. (Pop. 5,000 to 9,999)	.. ..	20	138,989	7.84
VI. (Pop. less than 5,000)	.. ..	5	17,483	0.99
<b>Haryana</b>	.. ..	<b>65</b>	<b>1,772,959</b>	<b>100.00</b>

The class I towns of Rohtak and Ambala Cantonment contain 12.82 per cent of the State urban population as 39.75 per cent in the class II towns (Karnal, Hisar, Panipat, Faridabad Township, Ambala, Bhiwani, Yamunanagar, Sonapat and Gurgaon). Most of these towns are either district or tahsil headquarters and have concentration of manufacturing activities. Of these, Faridabad Township and Yamunanagar are the blooming industrial centres of the State. Thus, 11 towns of class I and II account for 52.57 per cent of the urban population. Another 26.06 per cent of the urban population resides in 14 class III towns. Out of the remaining 40 towns, 15 belong to class IV, 20 to class V and 5 to class VI. It is interesting to note that the average size of a town in Haryana is 27,276 yet 72.31 per cent of its population is restricted to 20 urban places each having a population of more than the average size.

The urban population increased from 5.74 lakhs in 1901 to 17.73 lakhs in 1971 resulting into three fold increase. The growth pattern of urban population since 1901 has been tabulated in the table given below :—

Year			Number of Towns	Urban Population	Percentage decade variation
1			2	3	4
1901	..	..	54	574,074	..
1911	...	..	36	449,704	—21.66
1921	..	..	39	481,195	+7.00
1931	..	..	41	564,743	+17.36
1941	..	..	45	705,945	+25.00
1951	..	..	59	968,494	+37.19
1961	...	..	61	1,307,680	+35.02
1971	..	..	65	1,772,959	+35.58

Since urban growth is both effect and cause of economic development, the trends in urbanisation are a reliable index to economic health of a particular region.

Towns located within the zone peripheral to the Union Territory of Delhi, such as Faridabad Township, Ballabgarh, Faridabad, Bahadurgarh, Gurgaon, Sonapat, Jhajjar and Ganaur (a new town) have shown a rapid growth (cumulative growth rate is more than 30 per cent) due to their industrial expansion which stimulated large in-migration. Faridabad Township is important for engineering, electrical and transport goods, Ballabgarh for leather goods, Faridabad for processing of henna, Bahadurgarh for sanitary-wares and chemicals, Gurgaon for optical glasses and rubber goods, Sonapat for bicycles and Ganaur for steel tubes. The main reason for their quick development is their close proximity to Delhi, the capital of the country and the source of supply of raw materials and markets.

Another tract with rapid urban growth has been the north-western Haryana which includes Fatehabad, Uklanamandi, Kalanwali, Narwana, Sirsa, Uchana, Tohana, Mandi Dabwali and Jakhalmendi. Most of these towns are agricultural markets and their growth is attributed to increased agricultural production, with the availability of irrigational facilities from the Bhakra Canal and improved inputs etc.

The Hisar-Jind-Rohtak tract which includes Jind, Gohana, Hisar, Rohtak and Julana also recorded rapid urban growth. Hisar, Rohtak and Jind are district headquarters and have consequently expanded much. In case of Gohana and Julana, rapid growth is due to expansion of transport, commerce and education activities.

A rapid growth is also typical of the Thanesar-Yamunanagar tract which includes Pehowa, Thanesar, Yamunanagar, Jagadhri and Jagadhri Workshop Railway Colony. The establishment of a milk plant at Pehowa, of Kurukshetra University at Thanesar and growth of industries at Yamunanagar, Jagadhri and Jagadhri Workshop Railway Colony have grown rapidly. Jagadhri with 7.5 per cent increase has been included in this category for obvious reasons, because low growth rate is characterised by the treatment of Jagadhri Workshop Railway Colony as a separate town in the 1971-Census.

Areas of modern urban growth (cumulative growth rate 20 to 30 per cent) include towns which fall in two dissimilar parts of Haryana: the Karnal tract with distinctly progressive agricultural economy and southern and south-western parts of Haryana with meagre agricultural development.

The Karnal tract includes Karnal, Panipat, Kaithal, Ladwa, Radaur, Gharaunda, Pundri, Nilokheri and Safidon, where urban growth is not as fast as agriculture development. This may be due to the emergence of a large number of rural service centres, which share many of the functions of the towns and hinder further growth of existing towns.

The southern and south-western tract includes Hansi, Tosham, Bhiwani, Loharu Charkhi Dadri, Kanina, Mahendragarh, Ateli, Narnaul, Rewari, Bawal, Haileymandi, Pataudi, Sohna, Nuh, Palwal, Hodal and Ferozepur Jhirka, which has low agricultural production and lacks industry in general. The towns in this region have maintained growth by virtue of their several expanding activities in the fields of transport, health and education.

The areas with slow urban growth (cumulative growth is less than 20 per cent) include Ambala and Beri tracts. The Ambala tract includes Ambala Cantt., Kalka, Ambala, Chhachhrauli, Shahbad, Sadaura, Naraingarh and Buria. The slow urban growth in this area may be due to considerable out-migration impelled by sluggish functional growth of the towns.

The Beri tract includes Beri, Maham, and Farrukhnagar where slow urban growth may be due to their location near to Rohtak and Gurgaon towns.

It is evident that although urban places are discrete point phenomena yet their growth on a collective level is the result of regional as well as external forces on the basis of which urban growth zones can be discerned.

## AGRICULTURE

Agriculture occupies the foremost place in the economy of Haryana which is basically dependent on the vagaries of climate. Haryana is rich in agricultural resources and yet, paradoxically enough, it has remained poor because of stagnation in the subsistence agricultural economy and undue reliance upon nature. For decades preceding independence, agriculture remained mostly neglected, bound within traditional moorings and suffering deterioration thereby. Though planned efforts for the development of agriculture began in 1951, the year when the first five year plan was launched, but actual development in Haryana in the field of agriculture was started when it came into being as a result of bifurcation of the composite Punjab State. The total cropped area in Haryana was 3,470 thousand hectares in 1950-51 and became 4,599 thousand hectares in 1966-67 and then increased to 5,048 thousand hectares in 1971-72. On the other hand cultivable waste land has been reduced from 87 thousand hectares in 1966-67 to 37 thousand hectares in 1971-72. Percentage of net area irrigated to net area sown has become 43.9 in 1971-72 from 29.6 in 1960-61. The foodgrains production has increased from 25.92 lakh tonnes in 1966-67 to 45.46 lakh tonnes in 1971-72. The consumption of chemical fertilizer has increased from 13,347 tonnes in 1966-67 to 82,134 tonnes in 1971-72. The economic development of Haryana is largely dependent upon its agriculture which is progressing at a faster rate coupled with latest agricultural technique, scientific appliances, chemical fertilizer, use of improved seeds and provision of increased water supply.

## CATTLE WEALTH

Cattle wealth play an important role in the economy of Haryana, next to agriculture. It is the most developed State in India with respect to livestock population and rightly called as "The Denmark of India". It is famous for its well-known breeds of Haryana cattle and Murah buffaloes. Haryana being primarily an agricultural State, its rural economy thus stands tied up with cattle. Though Haryana has shifted a little from the traditional styles of dairy industry yet there is a large scope for its further development along with modern and scientific lines. Haryana is proud of its Government Livestock Farm at Hisar, the biggest Breeding Institute of Asia where valuable foundation stock for multiplication of the pure stock of various breeds of animals has been maintained. The Farm being the purest livestock breeding house in the country, supplies bulls of various breeds to other parts of the country as well as abroad.

## ELECTRIFICATION

Electricity is the first requisite for the upliftment of agricultural production and for bringing about socio-economic development in the rural areas, and also for industrialisation. Physiographically, Haryana is an alluvial plain with no drainage system to speak of, excepting for the River Yamuna at the eastern border, which restricts the scope for generating hydro-electricity. Other mineral fuels like coal or oil are also not available in the State.

Till 1969, Haryana was getting almost all its power supplies from the Bhakra Complex. During 1971-72, it had to secure almost 30 to 40 per cent of its total power from thermal sources which are more expensive than the hydel.

At the Ooty Conference of Power Ministers, it was decided that 50 per cent of rural electrification should be completed by the year 1980. Haryana had already executed cent per cent rural electrification by the 19th November, 1970.

It is true that consumption of electricity is an index of the progress and prosperity of a nation or a state. The annual consumption of electricity was 43.43 crore units at the time of formation of Haryana which increased to 107.68 crore units in 1971-72. The

availability of electricity has already revolutionised the social and economic structure of Haryana. The following table depicts the progress attained in the field of power supplies.

		1966-67	1971-72
1. Number of electrified villages	..	1,312	6,731 (100% village electrification in Nov., 70)
2. L.T. Lines	..	9,796	36,974
3. 11 Kv. Lines	..	7,089	25,856
4. Number of Transformers	..	5,390	17,872
5. Units sold (Lakh K.W.H.)	..	5,393.99	10,804.41

Although the consumption of electricity has gone up immensely, yet the demand for more power is ever increasing. It is true that electricity has powered the green revolution in Haryana.

## TRANSPORT

Haryana due to its location, serves as a transport corridor between the border States of Punjab, Himachal Pradesh and J & K and the rest of the country, therefore, these neighbouring States can find export possibilities only through Haryana, which has necessitated an efficient transport system. With the coming of the green revolution, it became necessary to connect villages to market centres. Roads had to be well maintained to ensure a continuous flow of raw materials from village to town and finished products from town to village.

The area now falling in Haryana had only 1,895 kilometres of metalled roads in August, 1947 whereas the road length (metalled) increased to 5,694 kilometres in 1966-67 and 12,501 kilometres in 1971-72. It is clear that the rapid development has been started after the formation of Haryana.

Side by side with the construction of new roads, due emphasis has been made on the strengthening and widening of the existing roads. Saharanpur-Kurukshetra, Panipat-Rohtak, Bahadurgarh-Jhajjar, Hansi-Bhiwani, Ambala-Pehowa-Kaithal-Narwana-Barwala-Hisar and Hisar-Tosham are some of the important roads which have been made double-lane. A thousand feet concrete bridge over the river Ghaggar has been constructed to make the Kalka Tahsil approachable entirely through Haryana.

The heavier movements such as coal, iron and steel, foodgrains, mineral oils and cement etc. are transhipped through railways. The broad gauge is mainly found in Ambala, Karnal, Rohtak and Jind districts, and parts of Districts Hisar and Gurgaon. The metre gauge serves the districts bordering Rajasthan, viz., Hisar, Mahendragarh and Gurgaon.

The narrow gauge is found in Tahsil Kalka (District Ambala) for about three kilometres only. This transshipment point handles all trade between the Haryana and the Himachal Pradesh.

The existing railway line capacities on a number of sections are either saturated or nearing saturation. These sections call for additional capacity.

Haryana had 567 buses on the 31st March, 1968. Her fleet strength today exceeds 1,400 buses. Haryana Roadways is financially the soundest State transport undertaking in the country. Haryana Roadways have earned a net profit of Rs. 123.70 lakhs from April, 1971 to September, 1971 against Rs. 108.70 lakhs for April, 1970 to September, 1970.

An additional attraction has been offered to the passengers travelling from Delhi to Chandigarh in the Air-conditioned buses of Haryana Roadways in the shape of film shows during the journey without any extra cost. Such a thing had not been attempted anywhere in the country before.

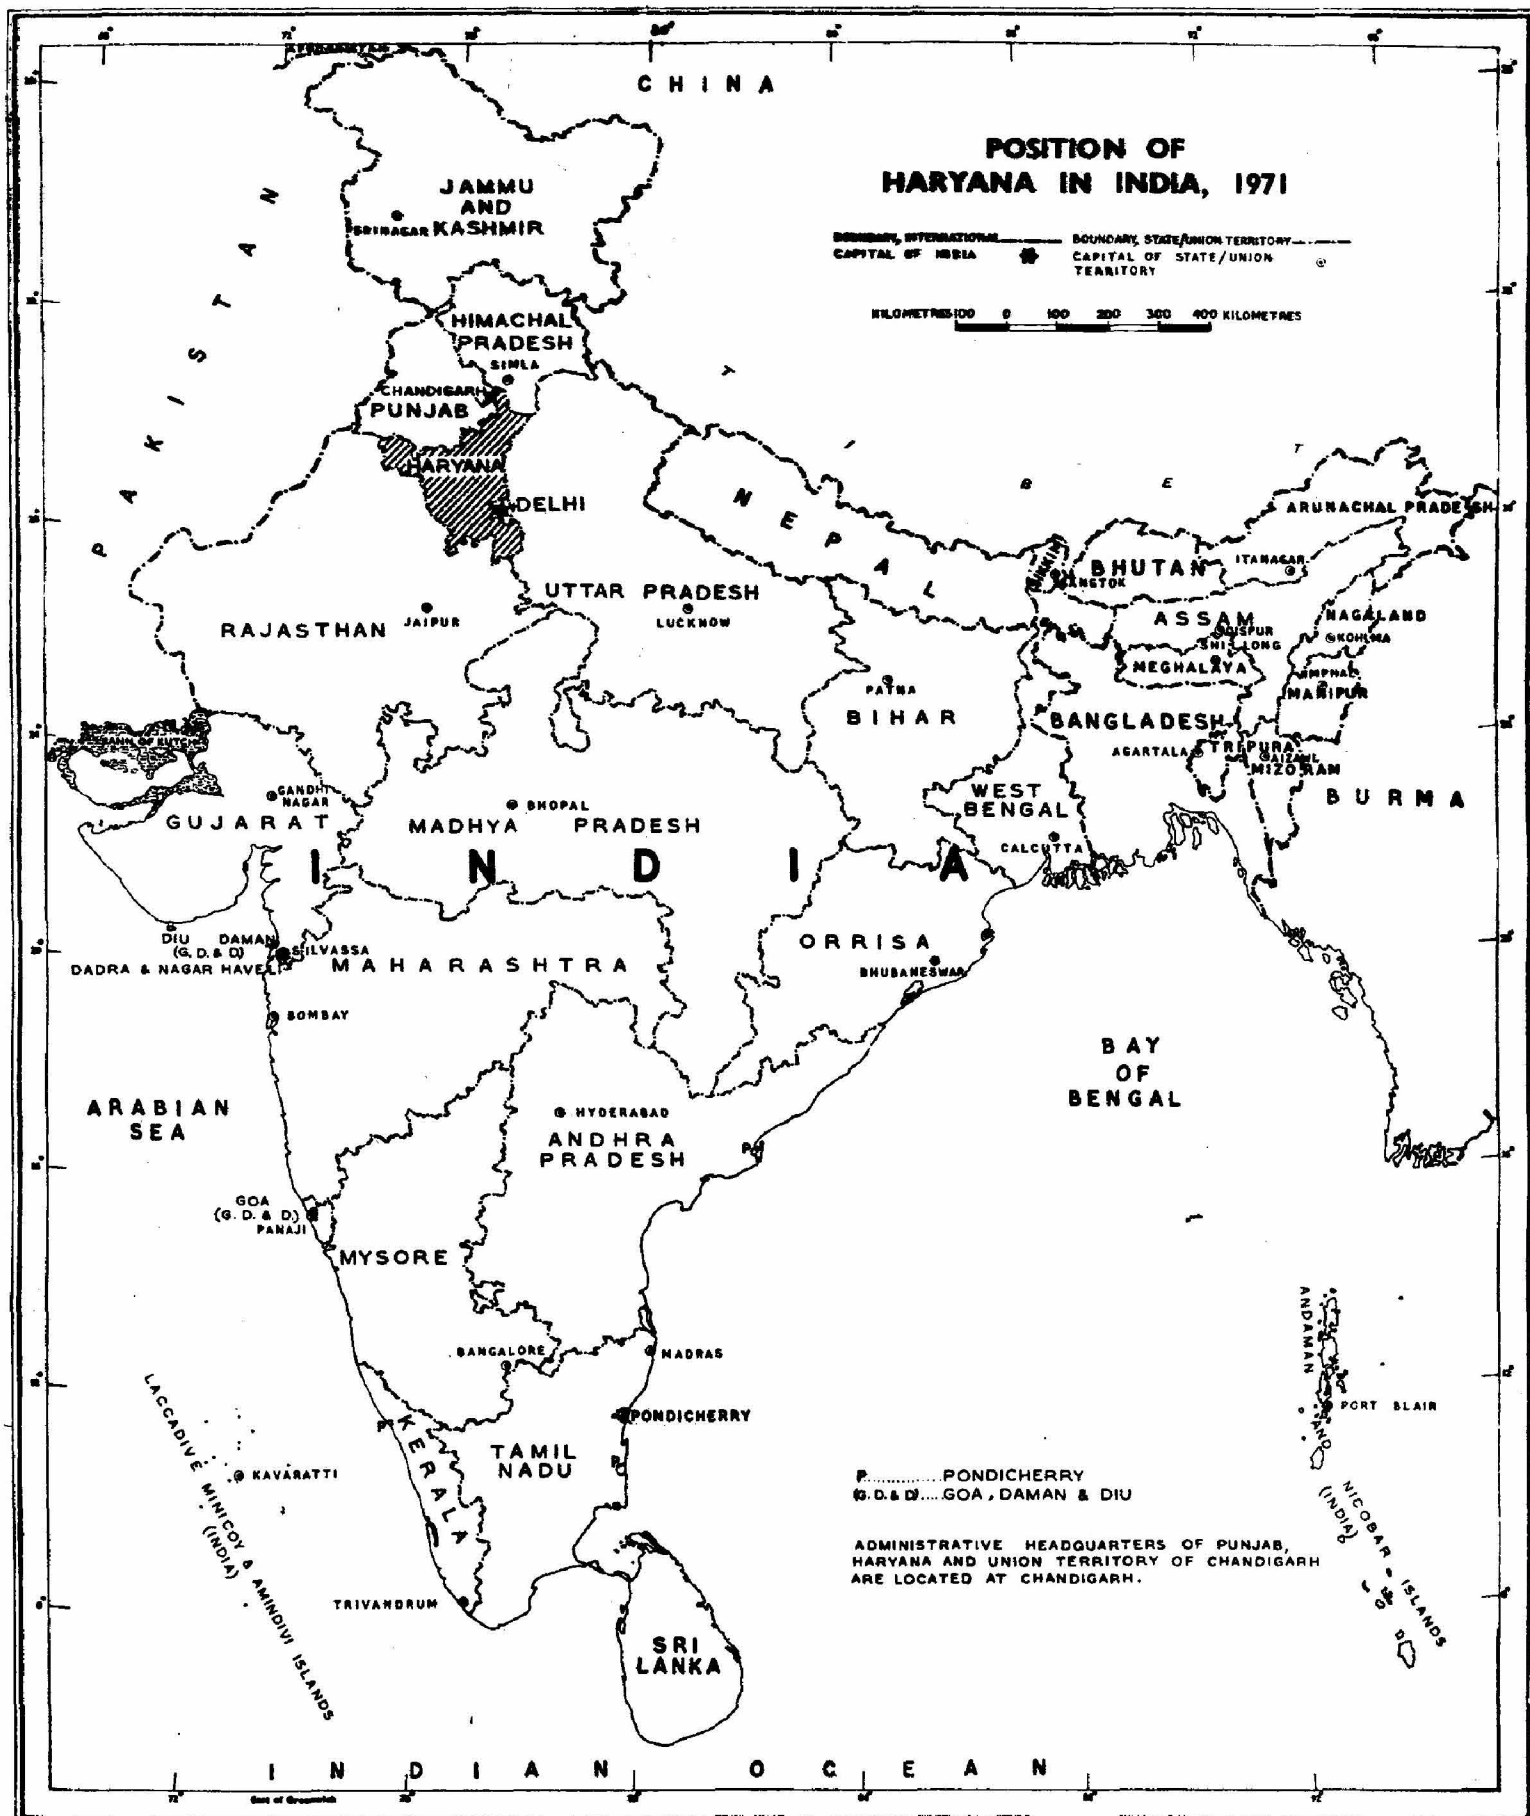

## MAPS

Based upon Survey of India map with the permission of the Surveyor General of India.  
The navigable waters of India extend into the sea to a distance of twelve nautical miles measured from the appropriate base line.

The boundary of Haryana shown on this map is as interpreted from the North-Eastern area (reorganisation) act 1971, but has yet to be verified.

X Jagadhri Workshop Railway Colony	(N.A.C.)	..	4,019	3,313	1,805	44				

### Other Data

	Population		Literates	
	Males	Females	Males	Females
Scheduled Castes	132,944	113,026	33,203	6,739
Scheduled Tribes	..	..	..	..
<b>Sex Ratio</b>				
	Total	Rural	Urban	
	859	852	875	
<b>Literacy</b>				
	Males	Females		
Total	256,750	133,612		
Rural	142,597	54,606		
Urban	114,153	79,006		

\* Total area figures for the District represent "Geographical Area" figures (provisional) supplied by the Surveyor General. Figures for urban areas are those supplied by the local bodies. Area figures for rural areas are derived by subtracting the urban area from the total area of the district. The total of the area figures of the tahsils will not tally with the district figures because the former represent 'land use area' and are derived from the figures supplied by the Director of Land Records.

\* Total area figures for the District represent "Geographical Area" figures (provisional) supplied by the Surveyor General. Figures for urban areas are those supplied by the local bodies. Area figures for rural areas are derived by subtracting the urban area from the total area of the district. The total of the area figures of the tahsils will not tally with the district figures because the former represent 'land use area' and are derived from the figures supplied by the Director of Land Records.

Urban	91,604		55,303	

\* Total area figures for the District represent "Geographical Area" figures (provisional) supplied by the Surveyor General. Figures for urban areas are those supplied by the local bodies. Area figures for rural areas are derived by subtracting the urban area from the total area of the district. The total of the area figures of the tahsils will not tally with the district figures because the former represent 'land use area' and are derived from the figures supplied by the Director of Land Records.

Rural	260,601	55,262		
Urban	105,722	58,428		

\* Total area figures for the District represent "Geographical Area" figures (provisional) supplied by the Surveyor General. Figures for urban areas are those supplied by the local bodies. Area figures for rural areas are derived by subtracting the urban area from the total area of the district. The total of the area figures of the tahsils will not tally with the district figures because the former represent 'land use area' and are derived from the figures supplied by the Director of Land Records.

Urban	20,824	9,392		

\* Total area figures for the District represent "Geographical Area" figures (provisional) supplied by the Surveyor General. Figures for urban areas are those supplied by the local bodies. Area figures for rural areas are derived by subtracting the urban area from the total area of the district. The total of the area figures of the tahsils will not tally with the district figures because the former represent 'land use area' and are derived from the figures supplied by the Director of Land Records.

Scheduled Tribes	..	..	..	..
Sex Ratio	Total	Rural	Urban	
Literacy	866	871	837	
	Males	Females		
Total	374,479	115,244		
Rural	272,433	59,579		
Urban	102,046	55,665		

\*Total area figures for the District represent "Geographical Area" figures (provisional) supplied by the Surveyor General. Figures for urban areas are those supplied by the local bodies. Area figures for rural areas are derived by subtracting the urban area from the total area of the district. The total of the area figures of the tahsils will not tally with the district figures because the former represent 'land use area' and are derived from the figures supplied by the Director of Land Records.

### Other Data

	Population		Literates	
	Males	Females	Males	Females
Scheduled Castes	65,440	56,707	8,876	695
Scheduled Tribes	..	..	..	..
Sex Ratio	Total	Rural	Urban	
Literacy	859	861	845	
	Males	Females		
Total	96,074	22,298		
Rural	72,452	9,963		
Urban	23,622	12,335		

\*Total area figures for the District represent "Geographical Area" figures (provisional) supplied by the Surveyor General. Figures for urban areas are those supplied by the local bodies. Area figures for rural areas are derived by subtracting the urban area from the total area of the district. The total of the area figures of the tahsils will not tally with the district figures because the former represent 'land use area' and are derived from the figures supplied by the Director of Land Records.
